

This document was compiled to provide resources to clinical supervisors seeking professional development related to telehealth and telemedicine.

All of the information is from the [National Consortium of Telehealth Resource Centers](#). There are also [region specific](#) telehealth resource centers, all of which are accessible from the main website.

There are many webinars and presentations that have already been recorded.

- Here are [past recorded events from the NorthEast Telehealth Resource Center](#) site.
- Here are past recorded events from the [archived page of the National Telehealth Resource](#) site.

Below are some select resources that we thought would be helpful.

[Telehealth Training Modules](#)

Multiple modules, each with a table of contents that allows the user to choose specific content areas. This eTraining provides an introduction to key concepts and resources to assist Telehealth Coordinators in building the knowledge and skills needed to successfully fill their role. It can also be used as a refresher course for those looking to revisit core information and/or update their skills. Requires free registration.

[NCTRC Webinar – Telemedicine: How to do it right!](#)

This telehealth training teaches participants how to do telehealth well and avoid common mistakes. We identified the core competencies through our research and over nine years and 20,000 telehealth sessions of experience. Participants learn how to engage patients and colleagues better, build stronger provider-patient relationships, create more private and comfortable treatment settings, demonstrate compassion and good “web-side” manners, and communicate more clearly.

[NCTRC Webinar – Telehealth Policy Updates in 2020](#)

Mei Kwong, JD the Executive Director of the Center for Connected Health Policy (CCHP) will give an overview of telehealth policy updates for 2020.

[National TRC Webinar – Behavioral Assessment and Intervention via Telehealth for Children with Autism and Related Disorders](#)

Telehealth service delivery allows for increase access to care and minimizing disparities in delivering behavior analytic assessment and intervention to children diagnosed with ASD and related disorders with challenging behaviors. In this webinar, we will discuss clinic-to-clinic and clinic-to-home pilot projects currently being carried out at Seattle Children’s Autism Center in which this specialty service has been effectively delivered through telehealth. We will discuss how we translated behavior analytic telehealth research into a systematic and sustainable

telehealth service delivery model in a hospital setting. In addition, pitfalls and recommendations for practice for providers will be discussed.
